

ACCOUNTCHEK®

Security and Accuracy Are Our Top Priorities

Lightning fast and amazingly simple to use, AccountChek® is trusted by leading financial institutions because it's safer than emailing, faxing or mailing copies of your bank statements and sensitive financial data.

Your Data Remains Private

Your credentials are masked as you enroll and protected with state-of-the-art encryption and 24/7 security monitoring while your order is being completed. Only with your permission can an Asset Report be pulled by your lender.

Your data stays in the United States in the Microsoft Azure Cloud, which uses state-of-the-art systems and real-time monitoring to keep your data secure.

We Protect Your Data With State-of-the-Art Security

AccountChek undergoes rigorous third-party audits and maintains industry-standard settings and security certifications.

Your data is encrypted while in transit and is transmitted directly to databases protected with hardware and software encryption.

We Are A Read-Only Product

The report we provide is accessible to your lender only through an encrypted digital key, and it's delivered in a read-only format.

The data comes directly from your accounts, so there are no errors or missing pages that could slow the process down. You choose which accounts to share.

We Retrieve Only Data

Because we are so careful with your data and how we deliver it, submitting information through AccountChek is more secure than emailing, faxing or mailing it.

We check all the boxes for simple, accurate and ultra-secure asset verification.
