

ACCOUNTCHEK[®]

Security and Accuracy Are Our Top Priorities

Submitting information through AccountChek[®] is more secure than sending sensitive financial documents via email, fax or mail.

We Use State-of-the-Art Security

AccountChek undergoes rigorous third-party, investor, and lender audits and maintains stringent security protocols and certifications, including SOC 2 and ISO/IEC 21002:2015. Our hosting partner, Microsoft Azure, is SSAE 16, SOC 2 and Cloud Security Alliance CAI certified. All data are encrypted at rest and in transit, are monitored in real time and are further secured behind firewalls and 2048-bit security keys.

We Are A Read-Only Product

AccountChek retrieves borrower asset data directly from the source, returning financial information to lenders in minutes in an encrypted, read-only product. Accessed via a secure ReissueKey[™] that can be used to make the report available to downstream users, our automated process allows data to flow unchanged from the source to the lender, ensuring its accuracy

We Keep Consumer Data Private and Secure

Data is encrypted in transit and at rest. Borrower credentials are submitted directly into a separate system with both hardware and software encryption. Consumer credentials are never visible to, or accessible by, anyone. AccountChek is designed so that consumer credentials are automatically purged from our system upon order completion.

We check all the boxes for simple, accurate and ultra-secure asset verification.
